ance Notes on Codes and Abbreviations" appearing at the begin-  
ning of each regular issue of the PCT Gazette.

(54) Title: APPARATUS FOR PERFORMING A FINGER-PRESSURE TREATMENT

(57) Abstract: An apparatus for performing a finger-pressure treatment on a body part includes a first finger-pressure rod to be in contact with one surface of the body part; a second finger-pressure rod for applying press on an opposite surface of the body part substantially opposite to said one surface; a driving unit for generating a rotational force; a rotation axle connected to an end portion of the second finger-pressure rod, for transmitting the rotational force of the driving unit to the second finger-pressure rod; an elastic member which is connected to an end portion of the first finger-pressure rod and applies an elastic force to the first finger-pressure rod in such manner that the first finger-pressure rod is rotated in a first direction opposite to a second direction in which the press of the second finger-pressure rod applied on the body part; and a mounting plate on which the rotation axle is rotatably mounted and the elastic member is mounted. The rotation axle is rotatably inserted into the end portion of the first finger-pressure rod, so that the rotational force of the driving unit is prevented from being transmitted to the first finger-pressure rod.
